

Of course. Here is a 10-minute pitch script for your project, "DoMyService," based on the detailed features you provided. The script uses simple, clear language to effectively communicate your project's value.

---

## Video Pitch Script: DoMyService (10-Minute Version)

**Presenters:** Parth Shikhare (Project Lead) should start and end. Other team members can present different sections.

---

### (0:00 - 1:00) Introduction & Hook

- **[Parth on screen, speaking clearly and warmly]**
- "Good evening. Imagine your tap starts leaking late at night. Who do you call? How do you know you can trust them? This is a problem we all face."
- "For years, finding reliable local help has been difficult, and the big apps that promise to help often take a huge cut from the workers."
- "We believe there's a better way. My name is Parth Shikhare, and on behalf of our entire team, I'm proud to introduce **DoMyService**. It's a simple, honest platform built to solve the Local Services Trust Problem and reconnect our communities."
- "And because we're based in Dombivli, we built it for everyone here, with full support for English, Hindi, and Marathi."

### (1:00 - 2:30) The Problem We're Solving

- **[Another team member, e.g., Chetan, takes over]**
- "Let's talk about the problem. It affects both sides."
- "For us, as customers, it's hard to find trustworthy service providers. We rely on random luck or old recommendations."
- "For the local plumbers, electricians, and carpenters, it's a struggle to find new customers beyond their small network. The big platforms that are supposed to help charge them very high fees, sometimes up to 30% of their earnings. This isn't fair."
- "These platforms focus only on the transaction. They don't help build the trust and community relationships that are so important."

### (2:30 - 5:30) Our Solution: DoMyService

- **[Another team member, e.g., Aarya, takes over]**
- "DoMyService is our solution. We focused on three things: making it easy for everyone, building trust, and ensuring fairness."
- **"First, we made it for everyone.** Our app is available in English, Hindi, and Marathi, and you can switch languages instantly. We also designed it with large, clear icons, so it's

easy to use even if you have trouble reading."

- **"Second, we built a system based on trust.** When you book a service, we use a secure code system.
  - Once a provider accepts your job, you both get a unique **Acceptance Code**. You match this code when they arrive, so you know it's the right person.
  - After the work is done, you get a **Completion Code** to verify the job is finished.
  - You **must** use this code to submit a review. This guarantees that all ratings are 100% authentic from real, completed jobs."
- **"Finally, we keep you informed.** You get real-time booking updates directly on **WhatsApp**. You'll know instantly when your booking is accepted or if there are any changes."

### **(5:30 - 7:00) Market and Business Model**

- **[Another team member, e.g., Nischay, takes over]**
- "Our target market is right here in our communities—people in neighborhoods like ours who need services, and the thousands of skilled local workers who provide them."
- "Our business model is built on fairness. We are completely against high commission fees. DoMyService does not take a percentage of the provider's earnings."
- "Our plan for the future is to introduce an optional, very low-cost subscription plan for providers to access premium features. This ensures the platform remains sustainable while our providers keep the money they deserve."

### **(7:00 - 8:00) The Impact We Create**

- **[Another team member, e.g., Yashraj, takes over]**
- "The impact of DoMyService is simple but powerful."
- "We empower local businesses by giving them a platform to grow without unfair fees."
- "We build real community trust through our transparent and verified review system."
- "And with our focus on multi-language support and accessibility, we are promoting digital inclusion, making sure no one in our community is left behind."

### **(8:00 - 8:45) Our Team**

- **[Parth returns to introduce the team]**
- "This project was a true team effort, built with passion over the last few days."
- "Our team includes Aarya, who led our frontend development; Chetan and Vinay, who built our powerful backend; Nischay, our full-stack developer; Yashraj, who designed the entire user experience; and myself, Parth, as the project lead."

### **(8:45 - 9:30) Conclusion & Transition to Demo**

- **[Parth closes the pitch]**
- "So, DoMyService is more than just an app. It's a simple, secure, and fair platform designed to bring trust back to our local service economy."
- "We've built a complete system, from OTP-based login to dual dashboards for customers

and providers."

- "Now, let me show you how it all works in a live demo."
